Subject: Microsoft Proposed Settlement

The proposed settlement by Microsoft is not a good idea. I live in a town that would not be considered wealthy by any standard. I worked in the computer lab and I know first hand that with the grants that are available from our state and from others that our school district is not hurting for computers. My understanding is that the Technology Director is considering a move away from Windows to running an as yet unknown version of Linux for all of the desktop computers to save from having all of the licensing problems that go along with Microsoft.
